# Chapter 1

## 1.1 Case Study

Recently our team observed that many of us want to travel inside and outside of Dhaka. Some cases are found against local CNG Cab Driver. People feel insecure when they travel alone. Some snatching occurred by drivers. There should be a proper solution regarding this issue.

## 1.2 Finding the Gap

In the existing market there is no proper software that ensures user confidentiality and give them proper security. In our system we give proper priority on user personal information. When user book car all the information is stored in the server.3.1

---

# Chapter 2

## 2.1 Feasibility Analysis

**2.1.1 Technical Feasibility:** We are using Visual Studio IDE, asp .net MVC framework for developing our project. As two team members are involved with the project we need two workable PC. We are using Windows 10 Pro as operating system in each PC. Also database server is needed to store data in a secure way. We have sufficient technical expertise to convert our ideas into working systems. Hopefully, we are able to meet our technical capacity.

**2.1.2 Economic Feasibility:** While doing cost estimation it shows us the overall view of costs needed to successfully finish the project within deadline. Recommended software and hardware have to be bought. Project manager, developers, testers and all members associated with the project need payment. We have to pay for database server also. Overall, the viability and credibility of the project become disclosure after the cost estimation which shows the positive economic benefits. Analysis shows that investment to this project will be recovered within a year.

**2.1.3 Legal Feasibility:** Any part of the project doesn't go against the law of our country. We have analyzed whether our project goes against data protection acts as data storage playing the big role. Also this project is legally publishable and users can use the system without any hesitation. For more credibility we have the legal license from the government under this project.

**2.1.4 Operational Feasibility:** Everything is set up in such a way that the project will be finished within allotted time. From project manager to all associated stakeholders have given their time at any need. Any changes in project are manageable as project has designed in such a way to adapt every problem that arises. Strategies in project development have assured the viability of the project.

**2.1.5 Scheduling Feasibility:** The project has been scheduled for 4 months. The project is scheduled in such a way that from requirements gathering to implementation, testing maximum possible time has been assigned.

## 2.2 Cost Estimation

### COST MANAGEMENT

#### 3.1 Project cost Estimate

Wbs items	Units/hr	Cost/unit/hrs	Subtotals	Wbs level totals	%of total
<b>1. Team Work</b>					
Team Manager	900	200	180,000		
Team Members	2100	100	210,000	540,000	11.4%
Contractors ( while 10% of software development & testing)			150,000		
<b>2. Hardware</b>					
Devices	80	10,000	800,000		
Servers	6	30,000	180,000	980,000	16.6%
<b>3. Software</b>					
Licensed Software	40	10,000	400,000	2300000	36.8%
Software Development			1,900,000		
<b>4. Testing</b>			200,000	200,000	4.02%
<b>5. Training &amp; Support</b>				500,000	5.32%
Training Cost	25	1000	250,000		4.35%
Travel Cost	10	5000	50,000		
Project Team Members					
<b>6. Others</b>			100,000	100,000	2.20%
<b>7. Reserve</b>			1,000,000	1,000,000	19.31
<b>Total Project Estimate Cost</b>				5,620,000

# Chapter 3

## 3.1 Introduction

This project is designed so as to be used by Car Rental Company specializing in renting car to customers. It is an online system through which customers can view available cars, register, view profile and book cars.

## 3.2 Aims & Objectives

- To produce a web-based system that allow customer to register and reserve car online and for the company to effectively manage their cars rental business.
- To ease customer's task whenever they need to rent a car.

## 3.3 Motivation

A car rental is a vehicle that can be used temporarily for a fee during a specified period. Getting a rental car helps people get around despite the fact they do not have access to their own personal car or don't own a car at all. The individual who needs a car must contact a rental car company and contract out for a car. This system increases customer retention and simplify vehicle and staff management.

## 3.4 Stakeholders

Admin, Company, Customer

# Chapter 4

## 4.1 Functional Requirements

<b>FR-01</b>	<b>Login and Logout</b>
<b>Description</b>	User will be able to login and logout to the system with valid user credentials.
<b>Stakeholders</b>	Admin, Company, Customer
<b>Priority</b>	High

<b>FR-02</b>	<b>Pick up info</b>
<b>Description</b>	Customer can input pick up location, pick up date, drop out date.
<b>Stakeholders</b>	Customer
<b>Priority</b>	High

<b>FR-03</b>	<b>Choose Car</b>
<b>Description</b>	Customer can choose car
<b>Stakeholders</b>	Customer
<b>Priority</b>	High

<b>FR-04</b>	<b>Booking</b>
<b>Description</b>	Customer can book car.
<b>Stakeholders</b>	Customer
<b>Priority</b>	High

<b>FR-05</b>	<b>Cancel</b>
<b>Description</b>	Customer can cancel booking
<b>Stakeholders</b>	Customer
<b>Priority</b>	Medium

<b>FR-06</b>	<b>Search</b>
<b>Description</b>	Customer can search car brand
<b>Stakeholders</b>	Customer
<b>Priority</b>	Medium

<b>FR-07</b>	<b>Send Feedback</b>
<b>Description</b>	Car company & Customer send feedback
<b>Stakeholders</b>	Company, Customer
<b>Priority</b>	Medium

<b>FR-08</b>	<b>Add Company</b>
<b>Description</b>	Admin can add car company
<b>Stakeholders</b>	Admin
<b>Priority</b>	High

<b>FR-09</b>	<b>Remove Company</b>
<b>Description</b>	Admin can remove any company
<b>Stakeholders</b>	Admin
<b>Priority</b>	High

<b>FR-10</b>	<b>Transaction</b>
<b>Description</b>	Admin can check transaction
<b>Stakeholders</b>	Admin
<b>Priority</b>	Medium

<b>FR-11</b>	<b>Monitoring</b>
<b>Description</b>	Admin can check Company & Customer Activity
<b>Stakeholders</b>	Admin
<b>Priority</b>	Medium

<b>FR-12</b>	<b>Get Feedback</b>
<b>Description</b>	Admin can check feedback
<b>Stakeholders</b>	Admin
<b>Priority</b>	Medium

<b>FR-13</b>	<b>View Report</b>
<b>Description</b>	Admin can view report in the system.
<b>Stakeholders</b>	Admin
<b>Priority</b>	Medium

<b>FR-14</b>	<b>Add new Driver</b>
<b>Description</b>	Car company can add new driver.
<b>Stakeholders</b>	Company
<b>Priority</b>	Medium

<b>FR-15</b>	<b>Add New Car</b>
<b>Description</b>	Car Company add new Car.
<b>Stakeholders</b>	Company
<b>Priority</b>	Medium

<b>FR-16</b>	<b>User registration</b>
<b>Description</b>	Admin, Customer, Company must be registered.
<b>Stakeholders</b>	Admin, Customer, Company
<b>Priority</b>	High

<b>FR-17</b>	<b>Remove Car</b>
<b>Description</b>	Car Company remove their Car at any time.
<b>Stakeholders</b>	Company
<b>Priority</b>	Medium

<b>FR-18</b>	<b>Maintenance &amp; Service</b>
<b>Description</b>	Company can maintenance & service their car
<b>Stakeholders</b>	Company
<b>Priority</b>	Medium

<b>FR-19</b>	<b>Sales &amp; Report</b>
<b>Description</b>	Company Can view Sales Report.
<b>Stakeholders</b>	Company
<b>Priority</b>	Medium

## 4.2 Non-functional Requirement

### 4.2.1 Performance Requirements

This requirement specifies a performance requirement or system performance. How many second it may take to response or complete a process.

#### 4.2.1.1 Speed and Latency Requirements

The system is required a speed when user want to change one page to another page.

<b>PR-01</b>	The new page will respond within 2 second.
<b>Description</b>	While the user's browsing the system the new page will show within 2 seconds. Sometimes it also depends on the user's internet connection speed.
<b>Stakeholder</b>	Admin, Company, Customer

#### 4.2.1.2 Precision and Accuracy Requirements

In this system has no precision and accuracy requirements.

#### 4.2.1.3 Capacity Requirements

The system can be managed all of information and process of the user.

<b>PR-02</b>	Initially, the system will store 50,000 user information.
<b>Description</b>	The details information of Customer, Car Company.
<b>Stakeholder</b>	Admin, Company, Customer

#### 4.2.2 Dependability Requirements

In this system here some functional requirements depend on another functional requirement, such as Add new Driver, Add new Car, Remove Car, Maintenance & Service and sales report depend on add company requirement. Transaction & View Report depend on customer Car booking.

##### 4.2.2.1 Reliability and Availability

If we consider this system and analysis the all of functional requirement here are some reliability issue, such as a doctor's prescription can't be edited by another doctor.

<b>DR-01</b>	The system must be available 24x7.
<b>Description</b>	The system must be available 24 hours in a day. The system must be updated regularly if needed.
<b>Stakeholders</b>	Admin, Customer, Company

#### 4.2.2.2 Robustness and Fault Tolerance Requirements

The system will almost ensure 0% crash in any single minor error and don't give any wrong calculation.

<b>DR-02</b>	The system handles over access and system errors.
<b>Description</b>	Sometimes multiple users can over access to this system. The system Can handle multiple user access.
<b>Stakeholders</b>	N/A

#### 4.2.2.3 Safety Critical Requirements

In this system there are no specific safety critical requirement

#### 4.2.3 Maintainability and Supportability

Supportability is not required for this system but in case if any course curriculum is update then it will need to change the calculation system.

##### 4.2.3.1 Maintenance Requirements

<b>MS-01</b>	The system helps to Company for rent their car.
<b>Description</b>	In this system Admin can remove company at any time.
<b>Stakeholders</b>	Admin

#### 4.2.3.2 Supportability Requirements

System support provider needs specific technical knowledge for the update and provides support about this system. Developer need required knowledge about data flow technique.

#### 4.2.3.3 Adaptability Requirements

There are no specific adaptability requirements.

#### 4.2.4 Security Requirements

Security requirement that are strictly followed are given below:

- Username/Key that is used to access the system for an individual has to be unique.
- If anyone access another Customer account by hacking or any other way, the admin instantly get notification and can stop the access.
- All data that are sensitive will be encrypted while passing through online.

##### 4.2.4.1 Access Requirements

<b>SR-01</b>	System provide security strategy.
<b>Description</b>	The system is designed in a way that allows all modules to access the mechanism that provide security services.
<b>Stakeholders</b>	Admin, Company, Customer

##### 4.2.4.2 Integrity Requirements

Information of users may be stolen that's why all username/key are stored in encrypted form.

##### 4.2.4.3 Privacy Requirements

The system is based on large database as all users' information are there. So privacy of data should be maintained strictly. Unauthorized access can destroy the database and all users' information and other things will be lost. If anyone got Customer username and password he/she can booking Car. Also have to keep in mind one can remove company using admin username, so privacy here is also important.

<b>SR-02</b>	All data will be protected.
<b>Description</b>	Users' information are very crucial and so privacy is ensured here.
<b>Stakeholders</b>	Admin, Company, Customer

#### 4.2.5 Usability and Human Integrity Requirements

How the users feel comfortable to use and overall their engagement with this system are defined here.

##### 4.2.5.1 Ease of Use Requirements

<b>UH-01</b>	The system is very much user friendly.
<b>Description</b>	Admin can Add Company, Remove Company. Customer can easily book the car. Company can easily Add their Car.
<b>Stakeholders</b>	Admin, Company, Customer

##### 4.2.5.2 Understand-ability and Politeness Requirements

This part indicates that those features that will be added in future will be understandable.

<b>UH-02</b>	The feature of RentMyCar.Com
<b>Description</b>	Every feature will be understandable to the user of this system. They easily can catch the newly added features.
<b>Stakeholders</b>	Admin, Company, Customer

---

#### 4.2.5.3 Accessibility Requirements

AR-1: Log in as an Admin

AR-2: Log in as a Customer

AR-3: Log in as a Company

AR-4: Log out as a Admin

AR-5: Log out as a Customer

AR-6: Log out as a Company

#### 4.2.5.4 User Documentation

<b>UH-03</b>	The system developer documentation
<b>Description</b>	Requirements of user documentation have been identified. Team works with this system are included here.
<b>Stakeholders</b>	System Developer

---

## **4.2.6 Look and Feel Requirements**

The system is very much interactive with the user and user feels comfortable when using it. The look of the system is not weird and user easily finds every feature.

### **4.2.6.1 Appearance Requirements**

Appearance of every page should be obvious to the user. What can be accessible and what can't be should be clear.

<b>LF-01</b>	Labels of mandatory fields must be indicated with asterisk sign.
<b>Description</b>	When a field with an asterisk sign left behind the user will be notified with a Red Cross symbol.
<b>Stakeholders</b>	Admin, Company, Customer

## **4.2.7 Operational and Environmental Requirements**

How to operate the system is defined here. The essential capabilities, performance measures are also identified.

### **4.2.7.1 Expected Physical Requirements**

There are no specific expected physical requirements.

### **4.2.7.2 Requirement for Interfacing with Adjacent System**

There is no specific interfacing with adjacent system requirements.

### **4.2.7.3 Release Requirements**

There are no specific release requirement.

## **4.2.8 Legal Requirements**

Rules and regulations have to be maintained. Any illegal activities are strictly controlled.

### **4.2.8.1 Compliance Requirements**

There are no specific compliance requirements.

### **4.2.8.2 Standard Requirements**

There are no specific standard requirements.

# Chapter 5

## 5.1 Use Case

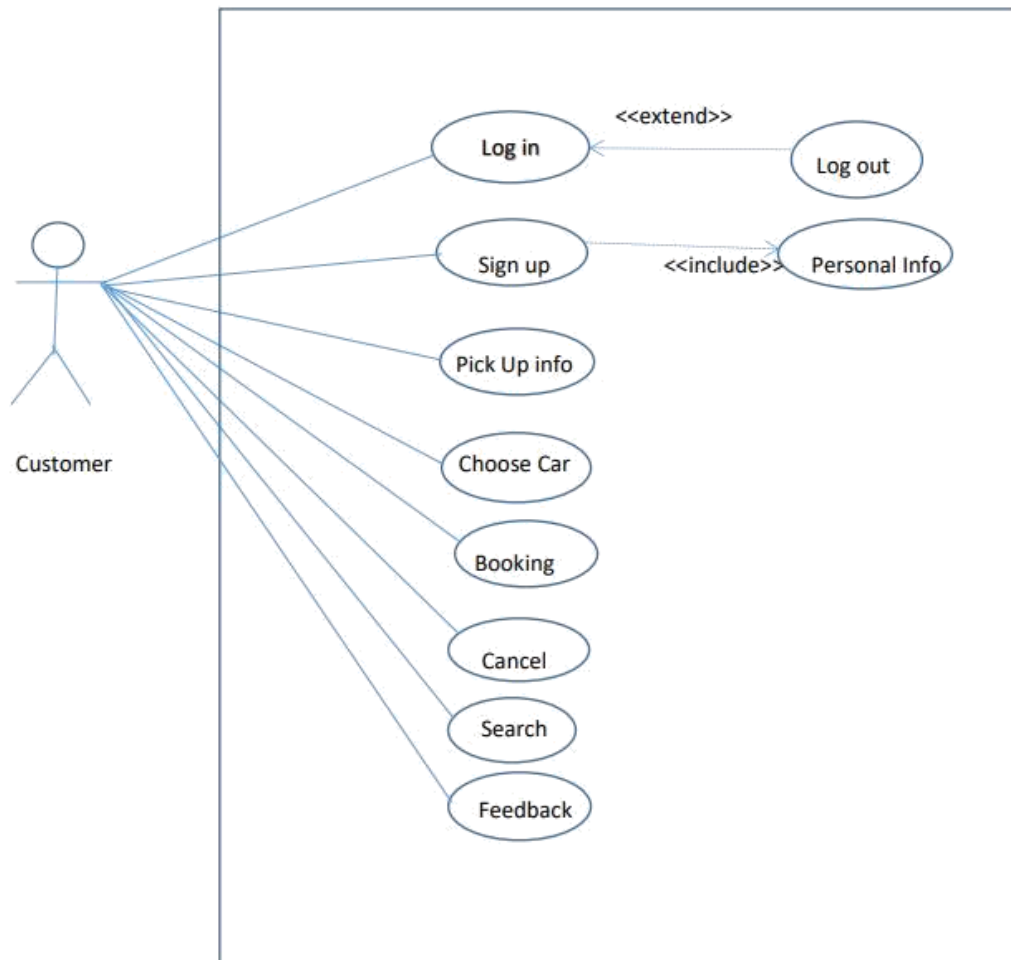

Figure 3: Use case for Customer

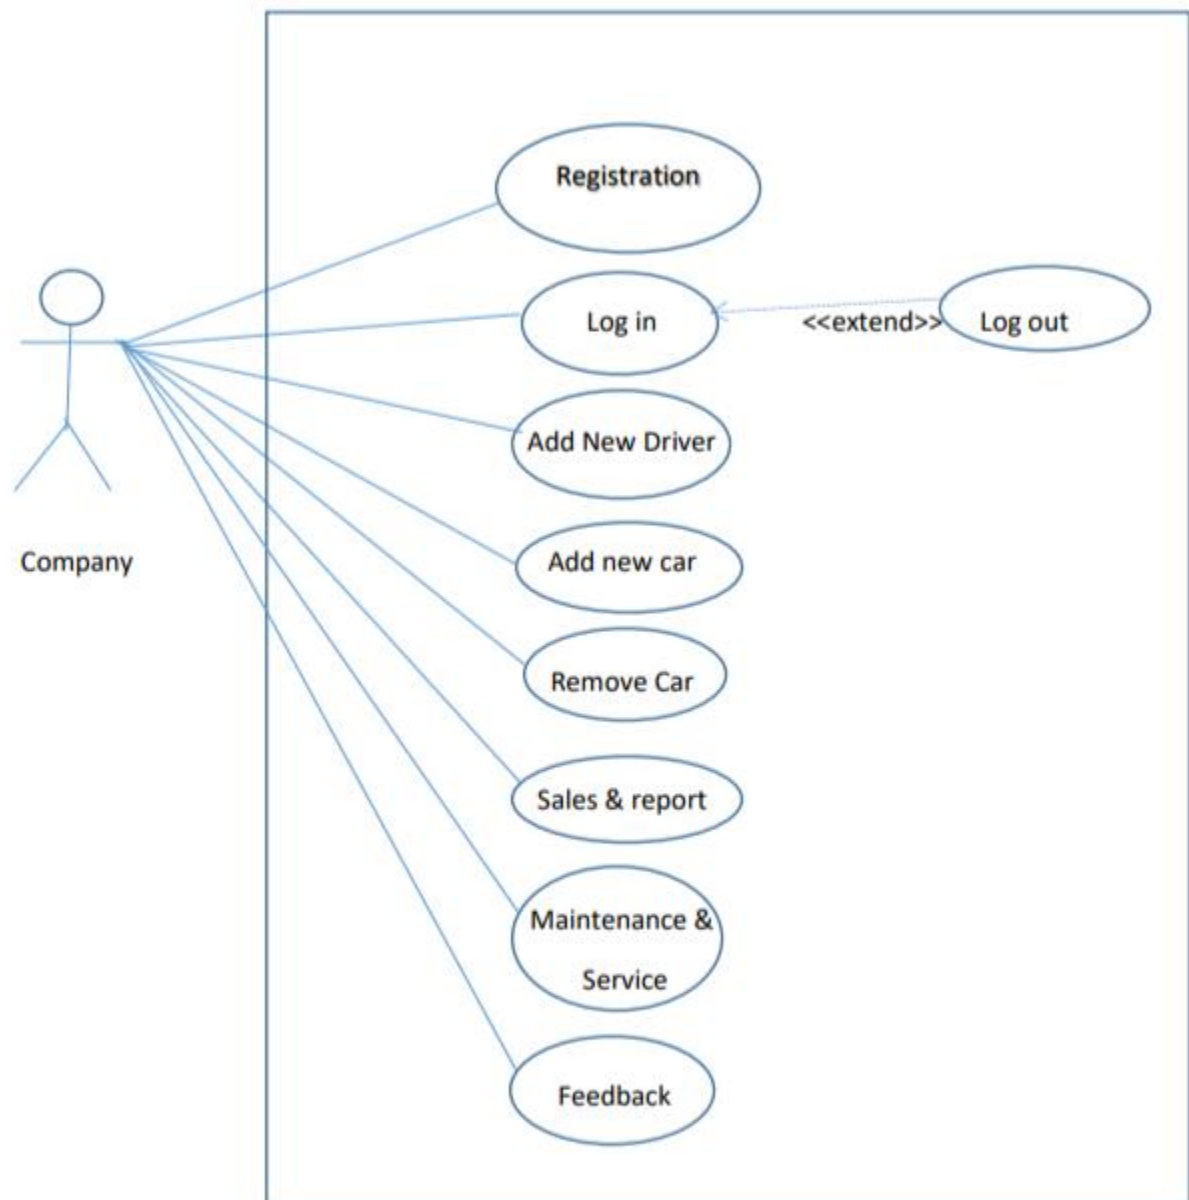

Figure 4: Use case for Car Company

Figure 5: Use case for Admin

## 5.2 Use Case Description

<b>Use Case Name</b>	Sign Up
<b>Actor</b>	Admin, Company, Customer
<b>Description</b>	Admin, Company, Customer should login to access the system.
<b>Precondition</b>	Admin ,Company, Customer must be on registration page
<b>Trigger</b>	By clicking on add Register button
<b>Flow of Events</b>	<ul style="list-style-type: none"><li>• Admin click sign in button</li><li>• Admin will click Register button</li><li>• Admin will select criteria of new user and add new company and enter their credentials</li></ul>
<b>Post Condition</b>	A new user/Company will be added into the system

<b>Use Case Name</b>	Login
<b>Actor</b>	Admin, Company, Customer
<b>Description</b>	Actor will log into the system by using their credentials
<b>Precondition</b>	Actor must be on login page
<b>Trigger</b>	By clicking login button
<b>Flow of Events</b>	<ul style="list-style-type: none"><li>• User will be on login page</li><li>• User will enter their credentials</li><li>• User will click login button</li></ul>
<b>Post Condition</b>	Actor will be logged in

<b>Use Case Name</b>	Pick up Info
<b>Actor</b>	Customer
<b>Description</b>	User can be input pick up location, pick up date, drop-off date.
<b>Precondition</b>	User will be logged in
<b>Trigger</b>	By clicking search available car & price.
<b>Flow of Events</b>	<ul style="list-style-type: none"><li>• User will be click on pick up info page</li><li>• User can be input pick up info.</li></ul>
<b>Post Condition</b>	User will be able to see available car & price..

<b>Use Case Name</b>	Choose Car
<b>Actor</b>	Customer
<b>Description</b>	Customer can choose car according to company and price
<b>Precondition</b>	Customer must be on home info page
<b>Trigger</b>	By clicking search button user can choose car
<b>Flow of Events</b>	<ul style="list-style-type: none"><li>• Click search button</li><li>• Show available Cars &amp; Company</li></ul>
<b>Post Condition</b>	Customer can able to choose car his/her car

<b>Use Case Name</b>	Booking
<b>Actor</b>	Customer
<b>Description</b>	Customer can book the car/cars
<b>Precondition</b>	Customer must be completed log in page
<b>Trigger</b>	By clicking book button customer can be booking car/cars.
<b>Flow of Events</b>	<ul style="list-style-type: none"> <li>• Customer click book button</li> <li>• The car/cars is booked</li> </ul>
<b>Post Condition</b>	Customer can book cars

<b>Use Case Name</b>	Cancel
<b>Actor</b>	Customer
<b>Description</b>	Customer can cancel booking at any time
<b>Precondition</b>	Customer must be Sign up
<b>Trigger</b>	By clicking cancel button
<b>Flow of Events</b>	<ul style="list-style-type: none"> <li>• Customer click cancel button</li> <li>• Rentals is canceled</li> </ul>
<b>Post Condition</b>	Customer car cancel the booking.

<b>Use Case Name</b>	Send Feedback
<b>Actor</b>	Customer , Company
<b>Description</b>	Customer , Company can send feed back
<b>Precondition</b>	Admin must be sign up
<b>Trigger</b>	Get Feedback button
<b>Flow of Events</b>	<ul style="list-style-type: none"> <li>• Click on Get Feedback Button</li> <li>• Customer &amp; Company Feedback is shown</li> </ul>
<b>Post Condition</b>	Send feedback report

<b>Use Case Name</b>	Search
<b>Actor</b>	Customer
<b>Description</b>	Search Car
<b>Precondition</b>	User must be on sing up page
<b>Trigger</b>	By clicking search button
<b>Flow of Events</b>	<ul style="list-style-type: none"> <li>• Click on search button</li> <li>• The available cars is shown</li> </ul>
<b>Post Condition</b>	Customer car search cars according to prices

<b>Use Case Name</b>	Add Company
<b>Actor</b>	Admin
<b>Description</b>	Admin can add new company in the system
<b>Precondition</b>	Admin must be sign up
<b>Trigger</b>	By clicking add new company button

<b>Flow of Events</b>	<ul style="list-style-type: none"> <li>• Admin click add new company</li> <li>• Check Company details</li> <li>• Company is added</li> </ul>
<b>Post Condition</b>	A new Company is entered in the system

<b>Use Case Name</b>	Remove Company
<b>Actor</b>	Admin
<b>Description</b>	Remove company from the system
<b>Precondition</b>	Admin must be sign up
<b>Trigger</b>	By clicking remove company
<b>Flow of Events</b>	<ul style="list-style-type: none"> <li>• Admin will click Remove company</li> <li>• Company is removed</li> </ul>
<b>Post Condition</b>	Admin can be able to remove company

<b>Use Case Name</b>	Transaction
<b>Actor</b>	Admin
<b>Description</b>	Admin can check transaction
<b>Precondition</b>	Admin should be transaction page
<b>Trigger</b>	By clicking Transaction Button
<b>Flow of Events</b>	<ul style="list-style-type: none"> <li>• Admin will be transaction page &amp; click transaction</li> <li>• Transaction report is shown</li> </ul>
<b>Post Condition</b>	Admin can be able to transaction

<b>Use Case Name</b>	Monitoring
<b>Actor</b>	Admin
<b>Description</b>	Admin can check Company and Customer activity
<b>Precondition</b>	Company must be on medicine page
<b>Trigger</b>	By clicking monitor button
<b>Flow of Events</b>	<ul style="list-style-type: none"> <li>• Admin click monitor button</li> <li>• The result is shown</li> </ul>
<b>Post Condition</b>	Admin can be able to monitor

<b>Use Case Name</b>	Get Feedback
<b>Actor</b>	Admin
<b>Description</b>	Admin can check feed back
<b>Precondition</b>	Admin must be sign up
<b>Trigger</b>	Get Feedback button
<b>Flow of Events</b>	<ul style="list-style-type: none"> <li>• Click on Get Feedback Button</li> <li>• Customer &amp; Company Feedback is shown</li> </ul>
<b>Post Condition</b>	Admin able to see feedback report

<b>Use Case Name</b>	View Report
<b>Actor</b>	Admin
<b>Description</b>	Admin will be able to view the report
<b>Precondition</b>	Admin must be on log in page
<b>Trigger</b>	By clicking view report
<b>Flow of Events</b>	<ul style="list-style-type: none"> <li>• Admin click on view report</li> <li>• The output shown on the screen</li> </ul>
<b>Post Condition</b>	Admin able to view the report of the system.

<b>Use Case Name</b>	Add new Driver
<b>Actor</b>	Company
<b>Description</b>	Company can Add new Driver
<b>Precondition</b>	Company must be on registered
<b>Trigger</b>	By clicking Add Driver
<b>Flow of Events</b>	<ul style="list-style-type: none"> <li>• Company will be on report page</li> <li>• Company will click on Add Driver button</li> </ul>
<b>Post Condition</b>	A new driver will be added.

<b>Use Case Name</b>	Add new Car
<b>Actor</b>	Company
<b>Description</b>	Company can add new car
<b>Precondition</b>	Company must be logged in.
<b>Trigger</b>	By clicking order add car button.
<b>Flow of Events</b>	<ul style="list-style-type: none"> <li>• Company clicked add new car.</li> <li>• The car info will be checked.</li> <li>• Car is added in the system.</li> </ul>
<b>Post Condition</b>	A new car will be submitted to the company

<b>Use Case Name</b>	Remove Car
<b>Actor</b>	Company
<b>Description</b>	Company can remove car.
<b>Precondition</b>	Company must be logged in.
<b>Trigger</b>	By clicking Remove Car button.
<b>Flow of Events</b>	<ul style="list-style-type: none"> <li>• Company clicked on remove car button</li> <li>• Get Notification for sure.</li> <li>• Car is Remove.</li> </ul>
<b>Post Condition</b>	Company will be redirected to their homepage after remove.

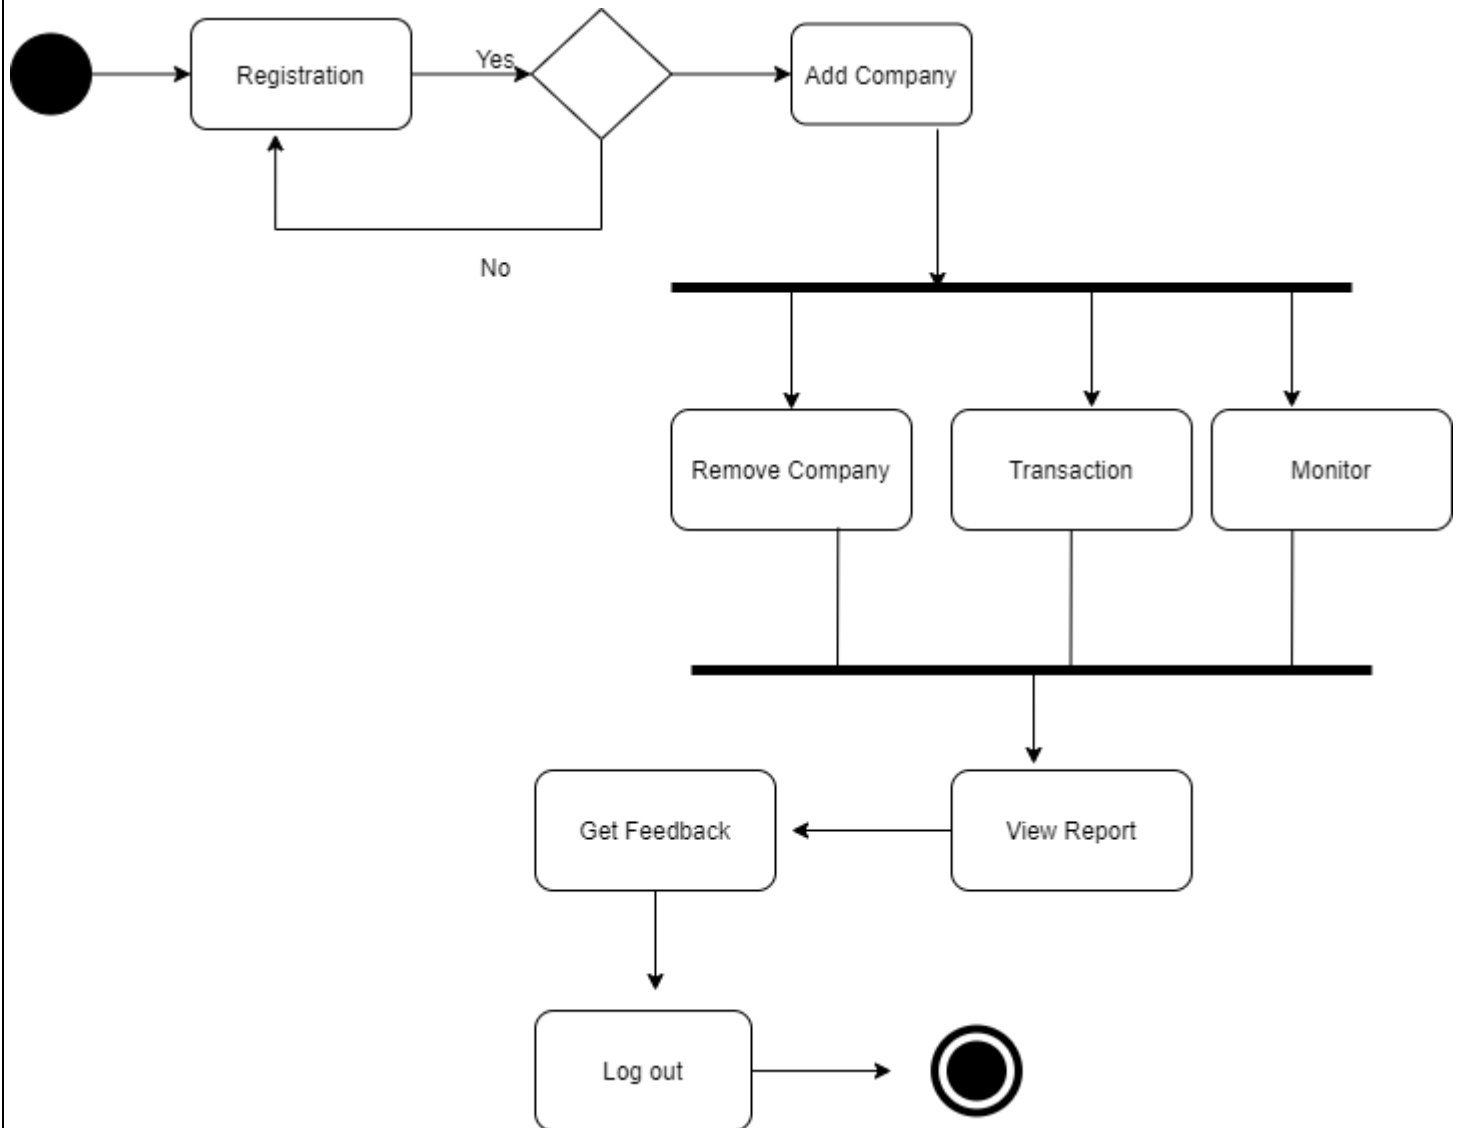

<b>Use Case Name</b>	Maintenance & Service
<b>Actor</b>	Company
<b>Description</b>	Company can service & maintenance their car.
<b>Precondition</b>	Car should be available in the company.
<b>Trigger</b>	By clicking maintenance & Service button
<b>Flow of Events</b>	<ul style="list-style-type: none"> <li>• Click on maintenance &amp; service button.</li> <li>• View report.</li> </ul>
<b>Post Condition</b>	Company will be redirected to their homepage after execution

<b>Use Case Name</b>	Sales Report
<b>Actor</b>	Company
<b>Description</b>	Company can review sales report
<b>Precondition</b>	Company must have some transaction
<b>Trigger</b>	By entering see sales report page
<b>Flow of Events</b>	<ul style="list-style-type: none"> <li>• Company will be sales report page</li> <li>• View sales Report</li> </ul>
<b>Post Condition</b>	Company will be redirected to their homepage after execution
